1. Purpose

This document defines the folder structure of the Quality Management System (QMS) for the Home Audio System project. The structure follows ISO 9001-style QMS principles, with each folder mapped to a specific class of project artefact. It works together with the file naming convention to ensure every project file is uniquely identifiable, locatable and traceable to the milestone or deliverable that produced it.

2. Folder Tree

The QMS folder tree below is mirrored on the project's GitHub repository. Files are placed according to the rules in Section 6 of the Naming Convention.
