

FILE NAMING CONVENTION

Home Audio System — Project Week 4
EE22005 Engineering Practice & Design

Document Title	File Naming Convention
Document ID	20260501_HAS_NamingConvention_v1.docx
Version	1.0
Date	01/05/2026
Author	BTA26,FS881, AC3847
QMS Location	QMS/Quality_Documents/Procedure/
Status	Approved

1. Purpose

This document defines the file naming convention used across the Quality Management System (QMS) for the Home Audio System project. The convention ensures that all project files are consistently named, version-controlled, easy to locate, and immediately understandable by all team members.

2. Scope

This convention applies to every file stored within the QMS folder structure, including but not limited to engineering documents, test evidence, simulation files, Arduino code, oscilloscope screenshots, photographs, project management documents, and quality records.

3. Naming Convention Format

All files shall follow the standard naming format below:

YYYYMMDD_HAS_Description_vX.ext

3.1 Field Breakdown

Field	Format	Description
Date	YYYYMMDD	Date the file was created or last revised, in ISO 8601 format. Example: 20260501 for 1st May 2026.
Project Code	HAS	Fixed project identifier for Home Audio System. Used on all files to distinguish this project from others.
Description	CamelCase	A concise descriptive name using CamelCase with no spaces. Should clearly indicate the file content. Example: BPF1_FreqResponse, GanttChart, TeamCharter.
Version	vX	Version number starting at v1. Incremented each time a substantive change is made. Draft versions may use v0.
Extension	.ext	Standard file extension matching the file type, e.g. .docx, .xlsx, .pdf, .asc, .ino, .jpg, .png.

3.2 Separator Rules

- Underscores (_) are used to separate the four main fields: Date, Project Code, Description, and Version.
- Spaces are **never** used in filenames.
- Special characters such as #, &, %, !, and @ are prohibited.

4. Version Control

Version control ensures traceability and prevents accidental overwriting of previous work.

- v0 — Draft or work-in-progress. Not yet reviewed or approved.
- v1 — First approved or released version.
- v2, v3, ... — Subsequent revisions after substantive changes.
- When a new version is created, the date field is updated to reflect the revision date.
- Previous versions should be retained (not deleted) to maintain an audit trail.

5. Naming Examples by File Type

The table below provides examples of correctly named files for each type of document encountered during the project.

File Type	Example Filename	QMS Folder
Project Management	20260501_HAS_ProjectManagement_v1.pdf	Operations/
Gantt Chart	20260501_HAS_GanttChart_v1.pdf	Operations/
Team Charter	20260501_HAS_TeamCharter_v1.pdf	Human_Resources/
D&D Matrix	20260501_HAS_DDMatrix_v1.xlsx	Quality_Control/
Naming Convention	20260501_HAS_NamingConvention_v1.docx	Procedure/
Master Doc List	20260501_HAS_MasterDocList_v1.xlsx	Documents_Gallery/
LTspice Schematic	20260428_HAS_BPF1_Schematic_v1.asc	Engineering/
Arduino Code	20260429_HAS_Spectrogram_v1.ino	Engineering/
Oscilloscope Screenshot	20260429_HAS_BPF2_FreqResponse_v1.png	Quality_Control/
Photograph	20260430_HAS_OLEDWelcomePage_v1.jpg	Quality_Control/
Test Protocol	20260430_HAS_ClassD_TestProtocol_v1.docx	Quality_Control/
Risk Register	20260501_HAS_RiskRegister_v1.xlsx	Operations/

6. QMS Folder Placement Rules

Each file must be stored in the correct QMS folder based on its content type. The table below defines the mapping.

QMS Folder	Content Stored
Quality_Documents/Quality_Manual	Quality policy, project quality objectives, and commitment to quality standards.
Quality_Documents/Procedure	File naming convention, testing procedures, and workflow procedures.

Quality_Documents/Forms	Quality forms, checklists, and templates. May be empty if none are produced.
Quality_Control	D&D matrix, test protocols, test results, oscilloscope screenshots, and verification evidence.
Engineering	Circuit schematics (.asc), Arduino code (.ino), simulation files, and technical documentation.
Operations	Gantt chart, project management plan, risk register, change log, and meeting notes.
Purchasing	Bill of materials, supplier information. Empty for this project week.
Sales_Customer_Service	Client-related documents and user requirement specifications.
Human_Resources	Team charter, role assignments, responsibility matrix, and meeting minutes.
Documents_Gallery	Master document list tracking all files in the QMS and their locations.

7. Document Gallery Requirement

The Documents Gallery folder must contain a master document list in Excel format (.xlsx). This spreadsheet records the name, version, date, author, QMS folder location, and status of every file in the QMS. The master document list must be updated each time a file is added, renamed, versioned, or moved. This ensures full traceability and allows any team member to locate any document within the QMS.

8. Responsibilities

- **All team members** are responsible for applying this naming convention to every file they create or save.
- **The Project Lead (bta26)** is responsible for auditing file names during daily check-ins and before final QMS sign-off.
- **The QMS custodian (fs881)** is responsible for maintaining the master document list in the Documents Gallery.

9. Revision History

Version	Date	Author	Change Description
v1.0	01/05/2026	bta26	Initial release.
